

Solution Composition

IS 2200

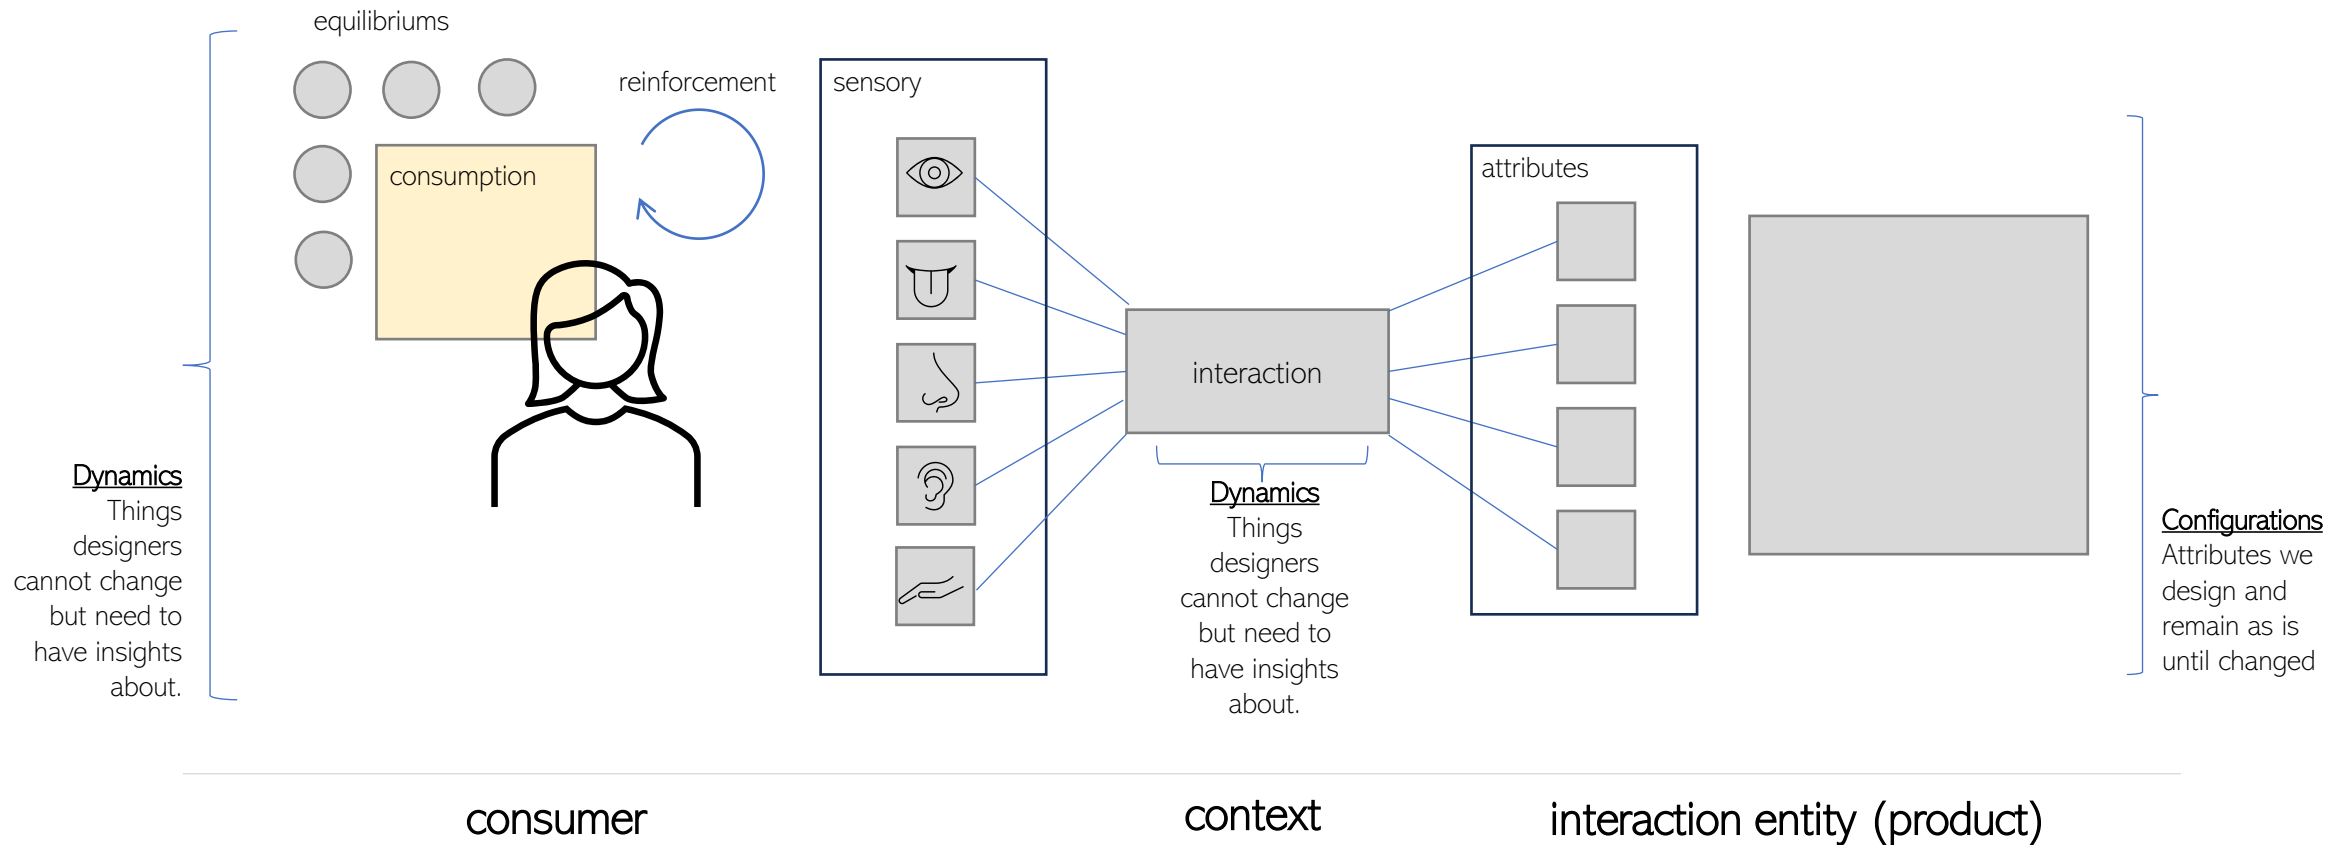

transformers

- Product decomposition
- Value association
- Attribute and value associations
- Product realization mapping
- Reverse mapping of existing solutions

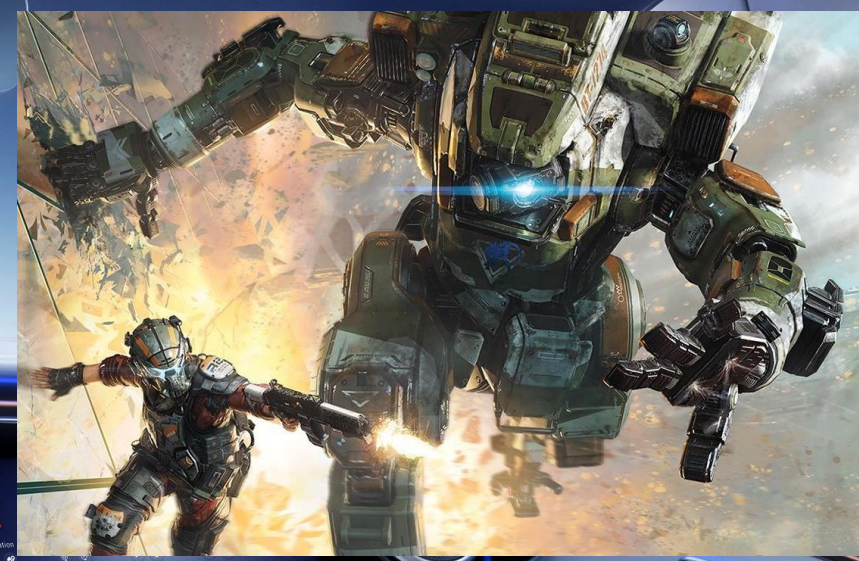

What is “product”?

configurations for dynamics

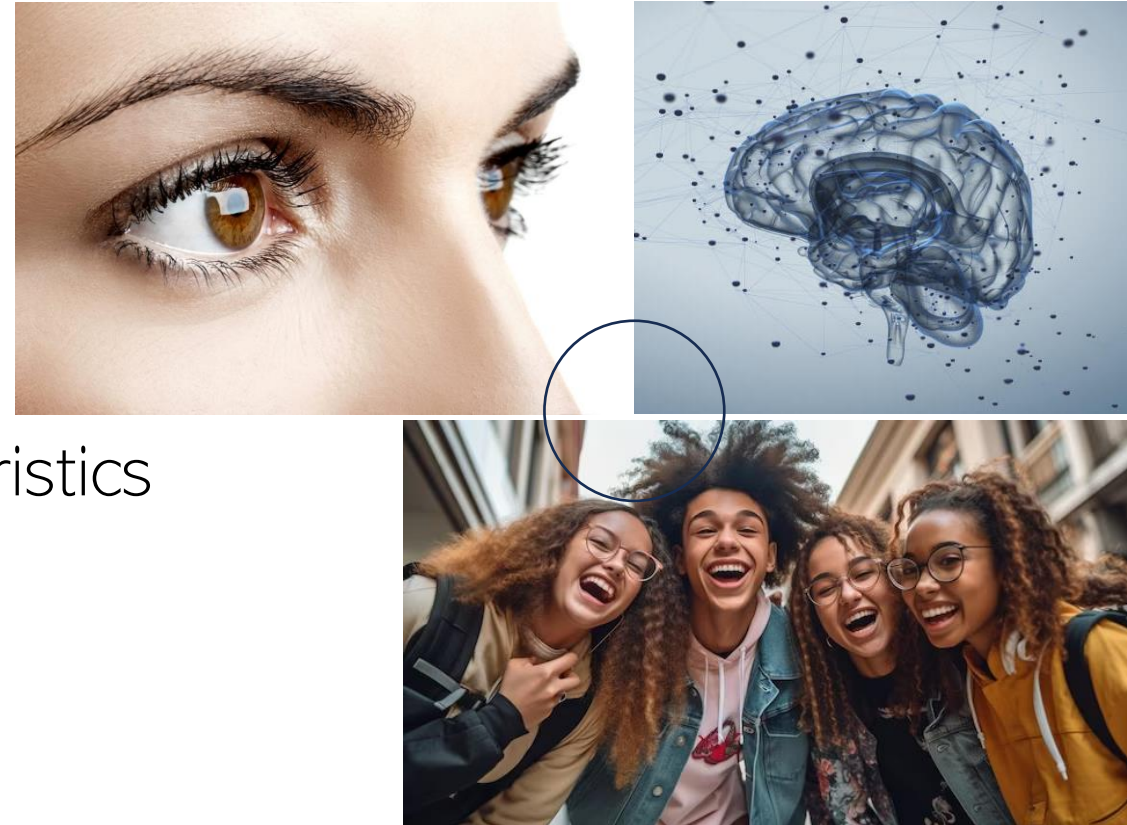

Product is a container of signals that the consumer interacts with, which will be realized as a set of values at the consumption and keep us satisfied or delighted (or not).

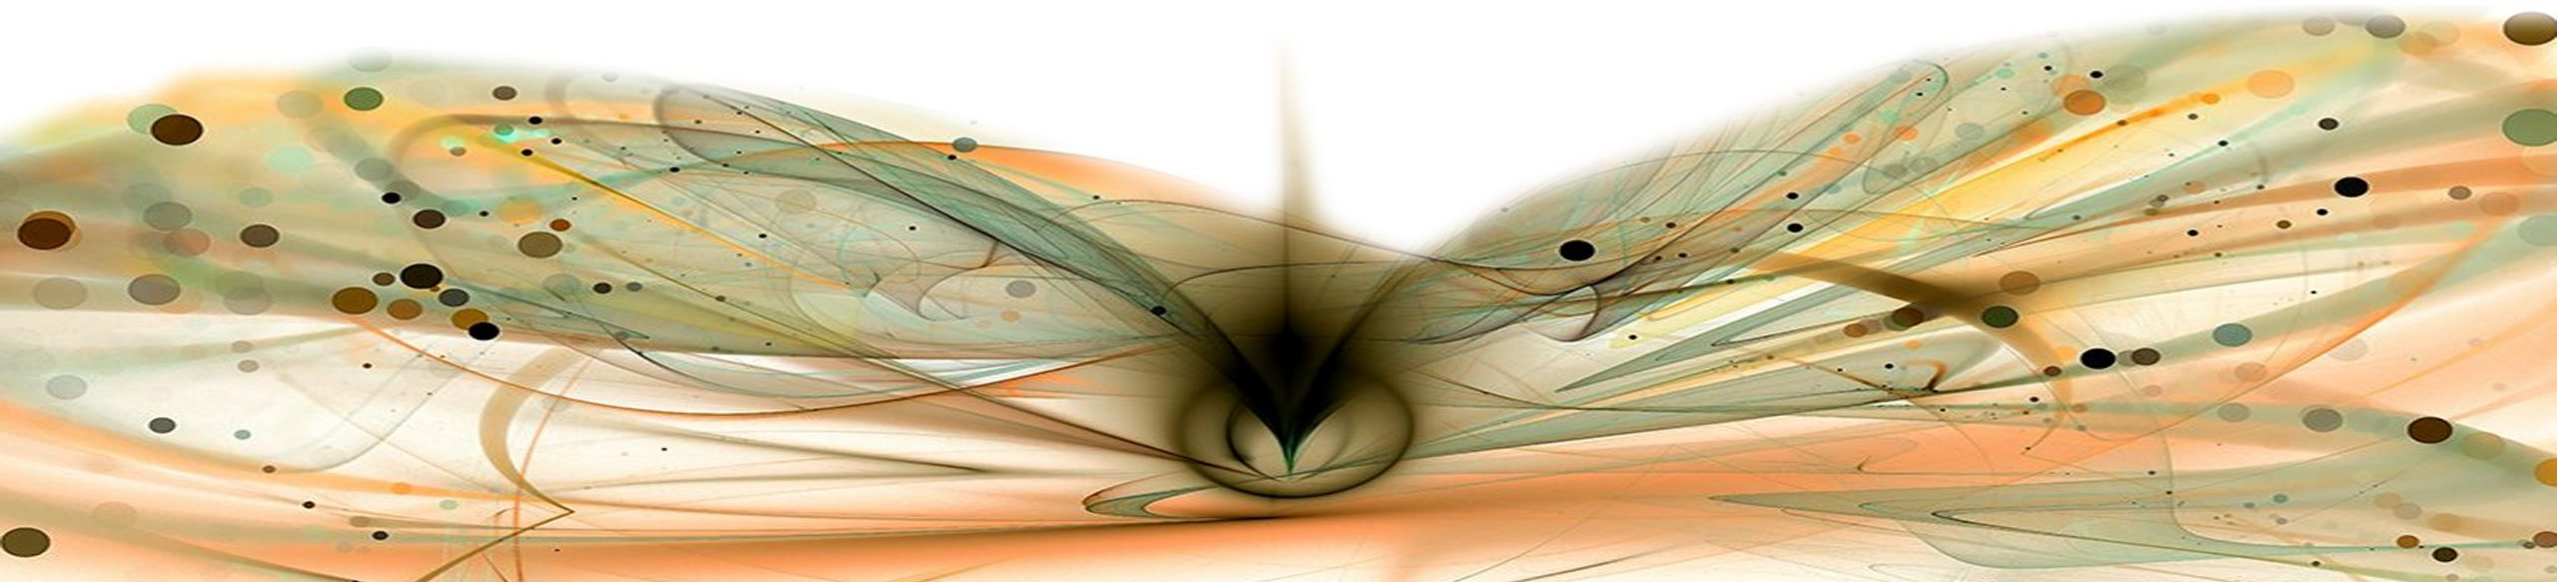

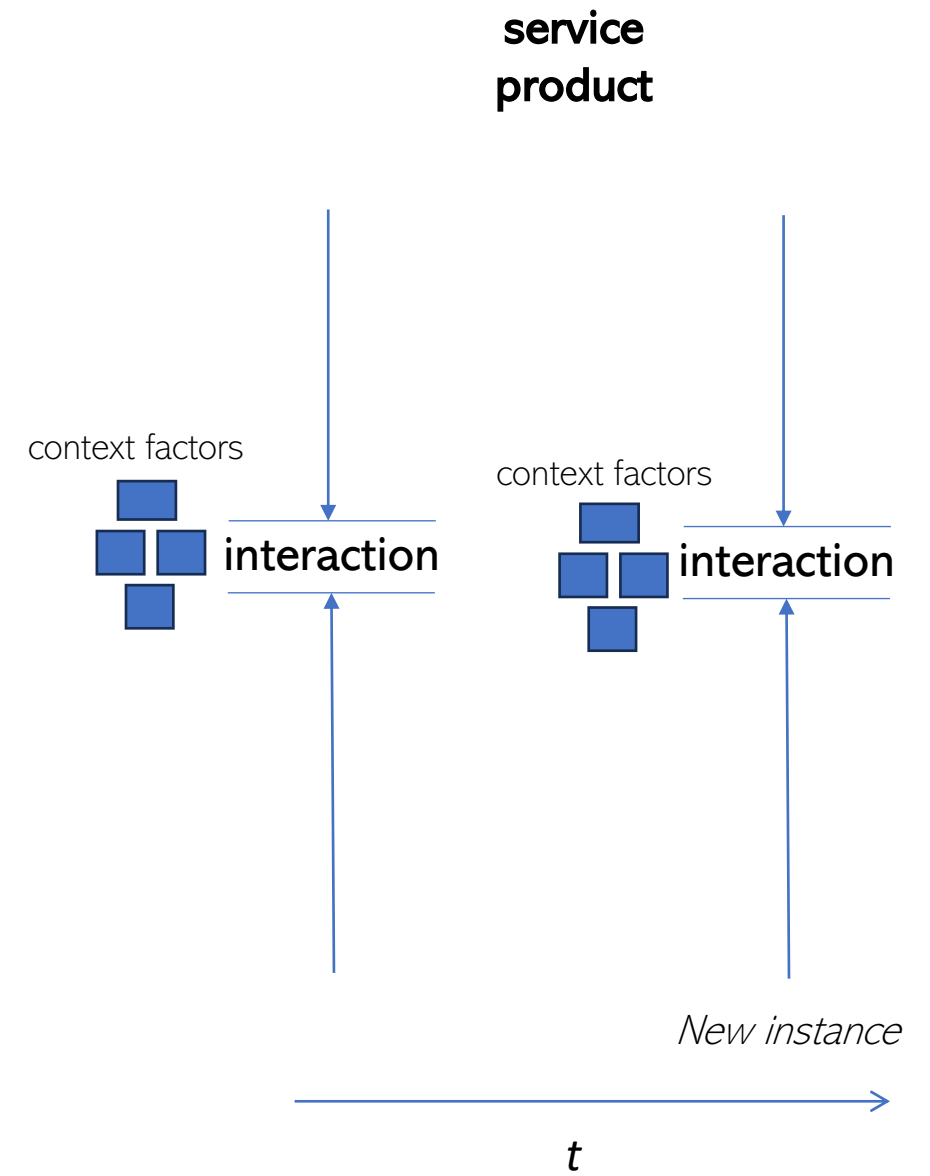

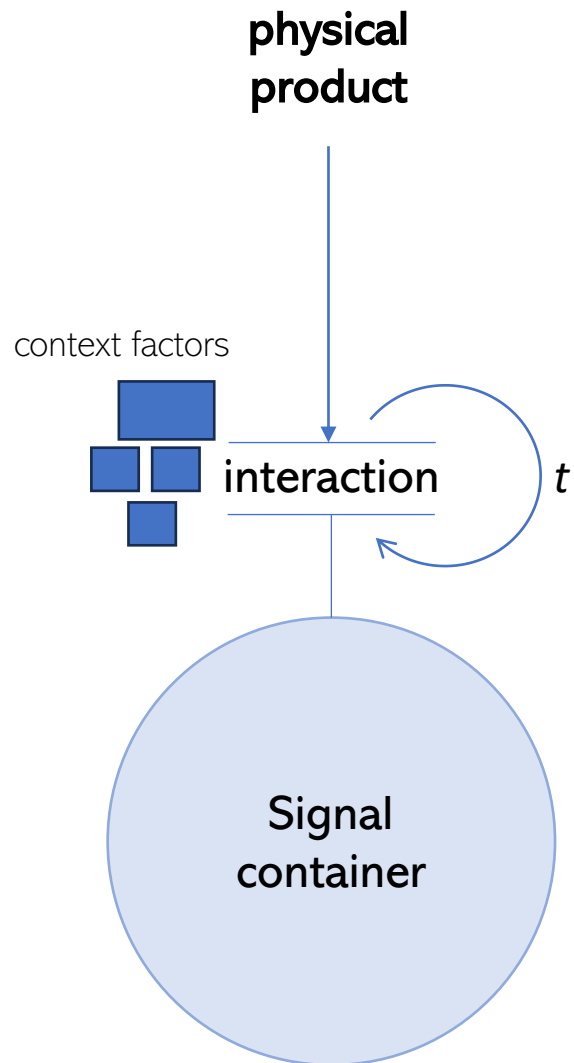

characteristics of a software product

- No physical presence
- Don't get perish but get outdated
- Can easily scale
- On-demand integration
- Has both physical and service characteristics

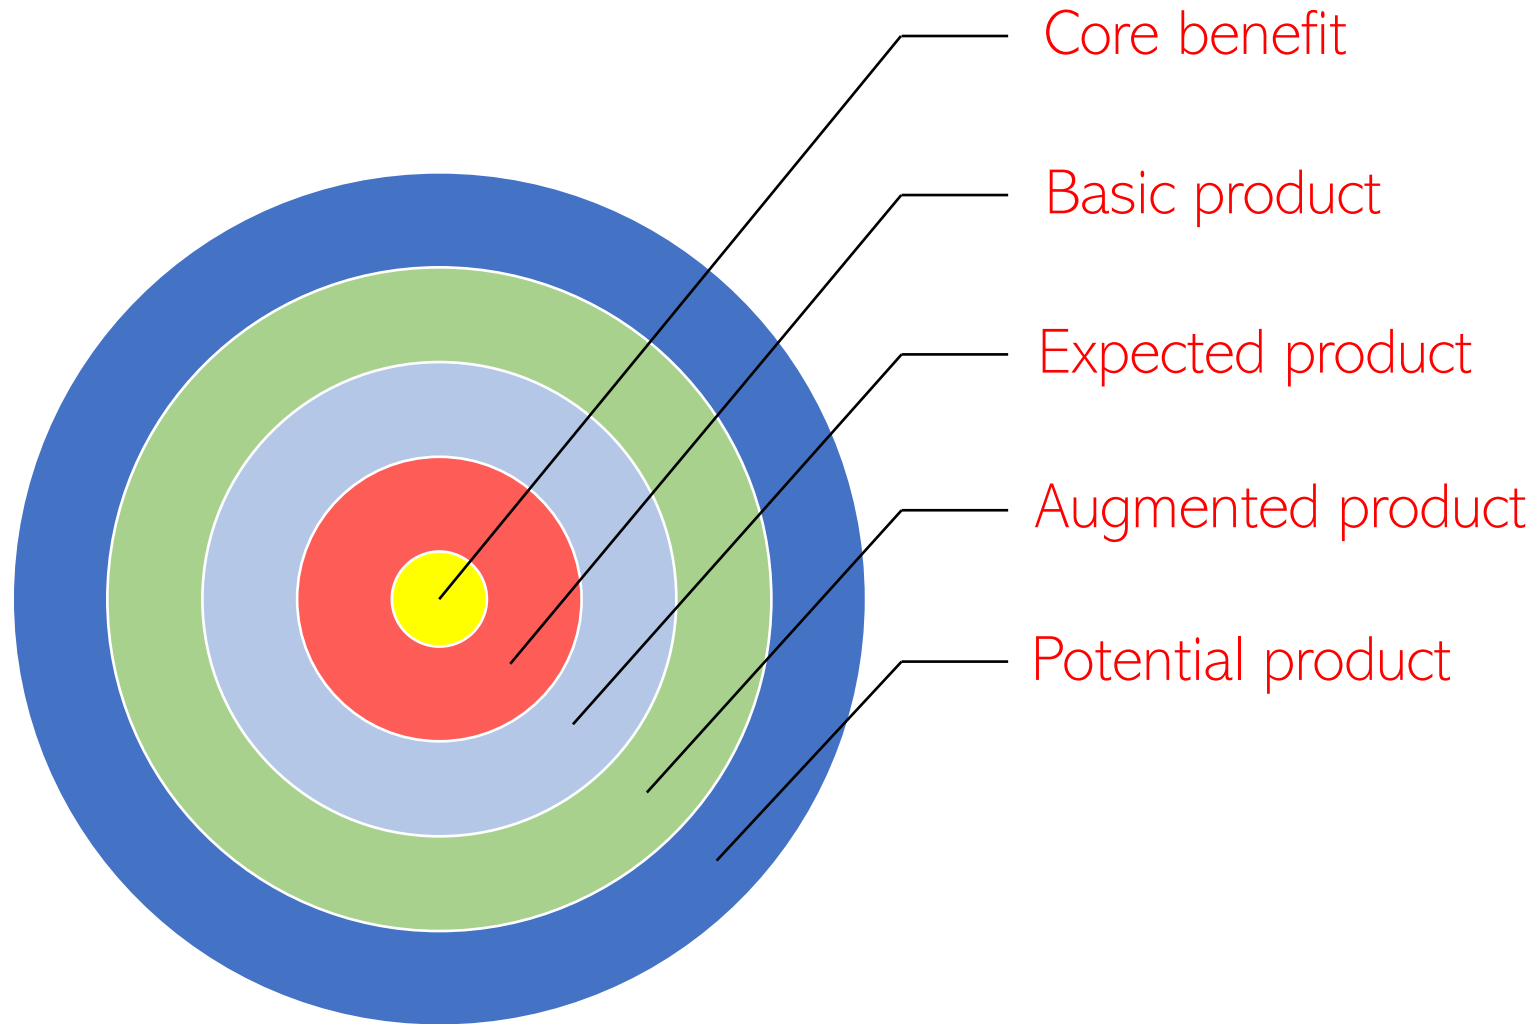

fundamentals of a product

Value - Hierarchy

*The actual expected value(s).
E.g. readiness, acceptance*

*The mean of which this core value is delivered. The vassal
e.g. Laptop*

*What configuration of the attributes customer expect.
E.g. Ryzen 9 7950X, 32GB, 1TB NVME*

*That exceeds the expected basic product.
E.g. Ms Word license, and excellent post-sale services.*

Future augmentations that provide solutions to the associated unresolved pains. E.g. Wireless charging, inbuilt projector

When designing
solutions, we need
to take MSE into
consideration

Experience

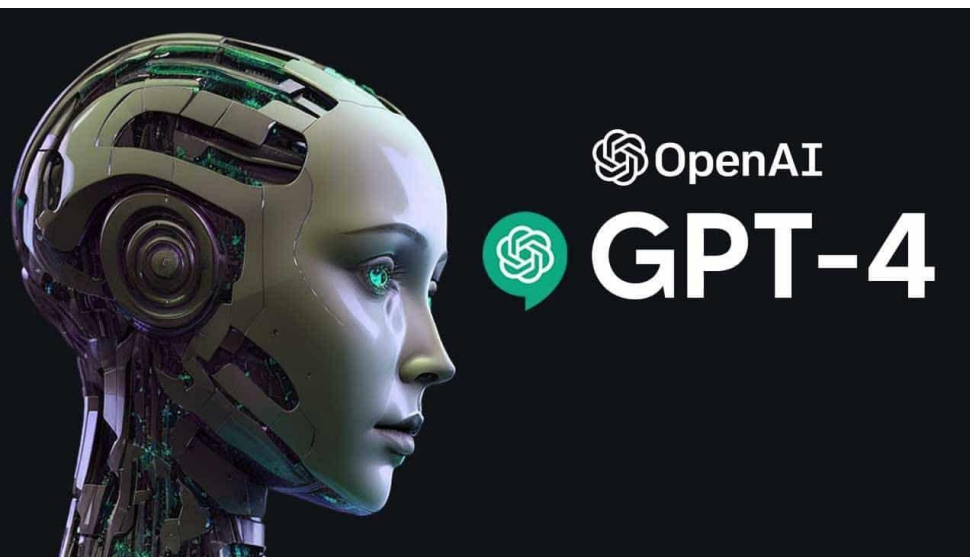

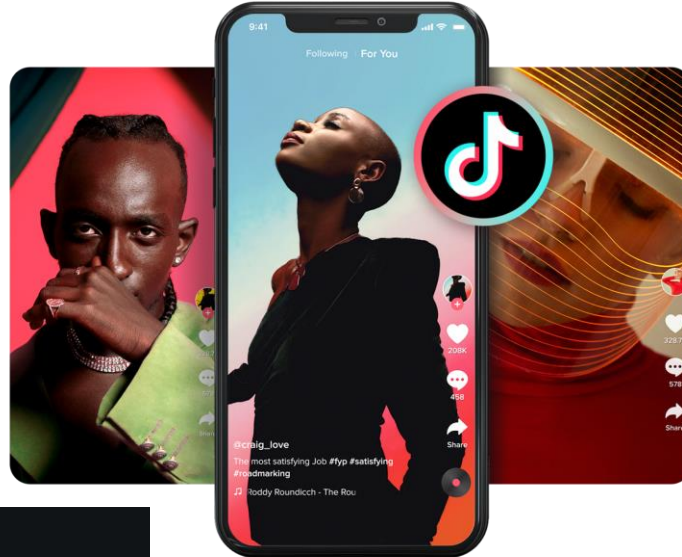

Value is

Released psychological tension because of consumption

INKSCAPE

Draw Freely.

Utilitarian

Psychological

Hedonic

Social

Scarifies

categories of value

- Instrumental value
 - Interactions consumers would introduce to physical interaction space that includes physical and biological environment
 - Product's performance of expected functions
 - Desired characteristics of a product
- Hedonic value
 - Create sensory / experience / emotions with the product
 - Sensory reception based

categories of value

- Symbolic value
 - Psychological meaning associated with a product
 - Personal meaning – e.g my mom use it
 - Self-expression (“what it tells about me”)
 - Social meaning (“What the society thinks of me”)
 - Conditional meaning
 - Socio cultural; ethnic meanings

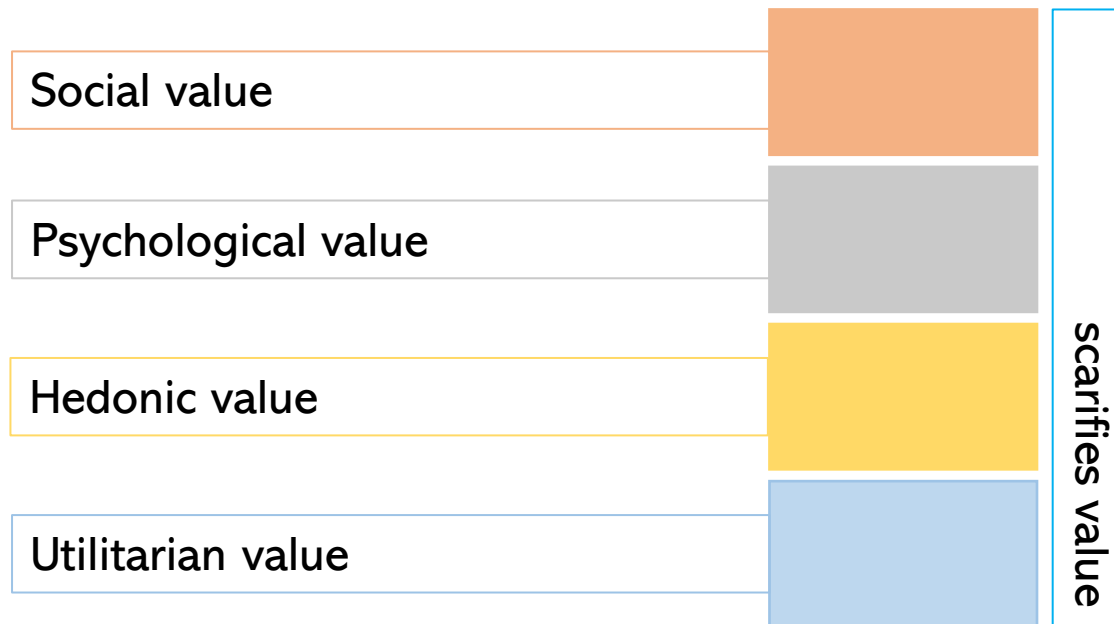

Maliban : යහ ගුණයෙන් පිරි

Commercial Credit: ඔබේම ප්‍රියයන් ඔබේ ප්‍රථම රාජකාරිය කරගන්න අමතක නොකරන්න

categories of value

- Sacrifice value
 - Minimizing the cost of all
 - Monetary cost
 - Pre-purchase cost; purchase cost; use cost; and post-use cost
 - Energy cost
 - Effort
 - Psychic cost
 - Stress, perceived risk
 - Time cost
 - Time invested in getting the product

value stack

- Value elements will have a value hierarchy-like effect
- When they seek out value elements of the higher order, the lower order values will have a “given” state. i.e., they will become enablers

sources of value – interaction space

- Information
 - Through customer communication activities; IMC, Websites
- Product
 - Through product features and R&D
- Interactions
 - Customer interactions through employees and systems. Through proper recruitment and training. E.g. site optimization, recommendations
- Environment
 - Consumption environments. Through interior design, facilities management, merchandising.
- Ownership
 - Transferring ownership; at bill payments, packaging, and delivering.

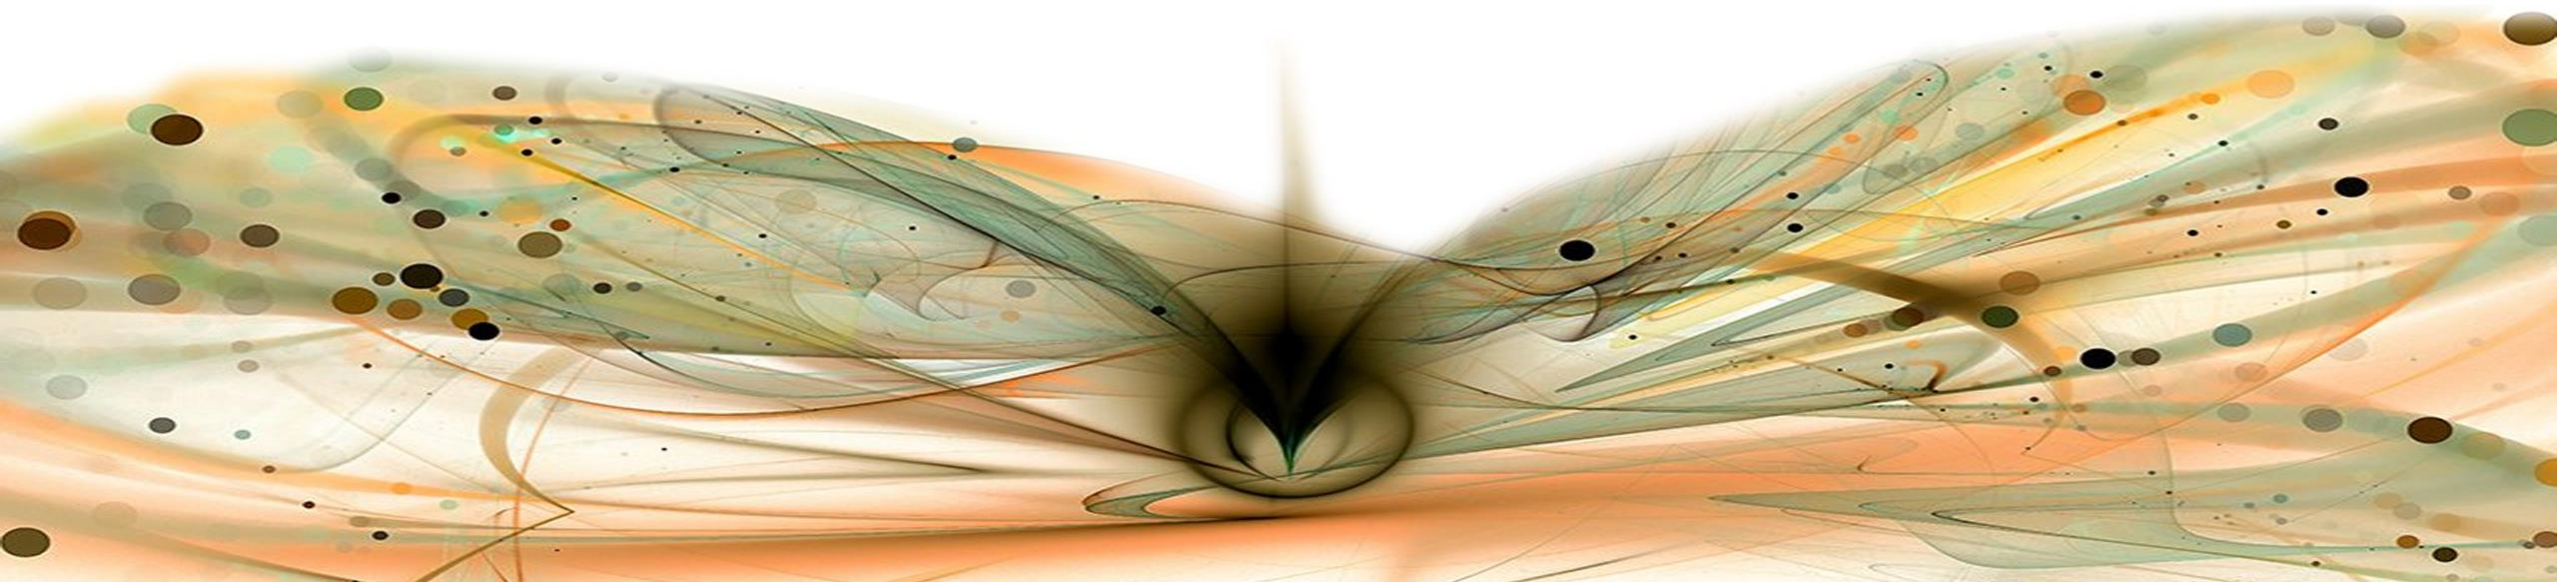

Value Creation Framework

Source \ Value	Information	Product	Interaction	Environment	Ownership transfer
Instrumental /Functional	Educating customer	Product features	Timeliness of service	Appropriate lighting	Easy payment; Timely delivery
Hedonic /Experiential	Creative ads to trigger emotions	Smell, Comfort	Relational bonds	E.g. music that creates enjoyable shopping	Presentation of goods
Symbolic	Interpreting meaning. E.g. you are special	Personal meaning with brand E.g. Harley Davidson	Prestige of being in such interactions	E.g. Avruddhu decorations	Enhance meaning with tasteful wraps
Sacrifice	Comparative ads	Reducing risk (e.g. warranty) Discounts	Providing assurance and reducing personal cost	Free ample parking	Provide package tracking

Activity 01

- Pick a social media profile of your friend and analyze the following
 - Categories the events and information they share on the wall
 - Analyze the value stack of each category
 - Explain realization of the tri-core of value with each category
 - Come up with the value stack for your friend in general

Value Elements

Consumption Space

Activity 02

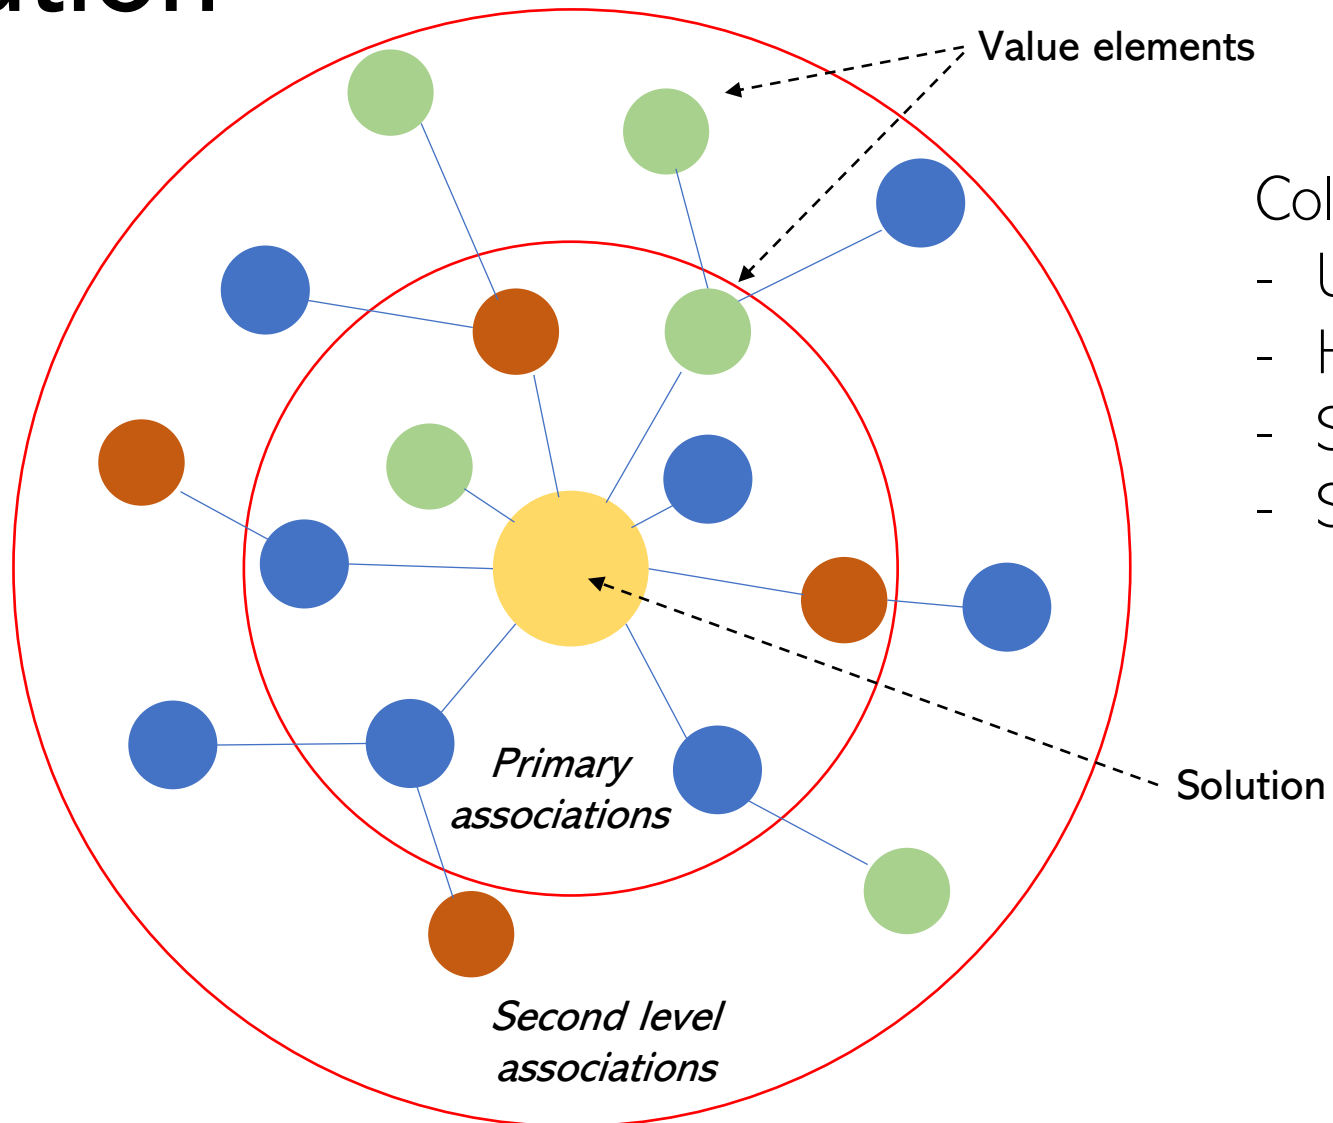

- Pick any technology product and do the following
 - Decompose into components
 - Identify the attributes associated with each component
 - Identify the associated consumption values
 - [future: identify the associated clusters of interactions and values that could be of different segments]

Solution is associated with all the consumer interactions of pre-acquisition, acquisition, use, and post-use. It is not just the “product.”

Associated Value Profile (AVP) of a solution

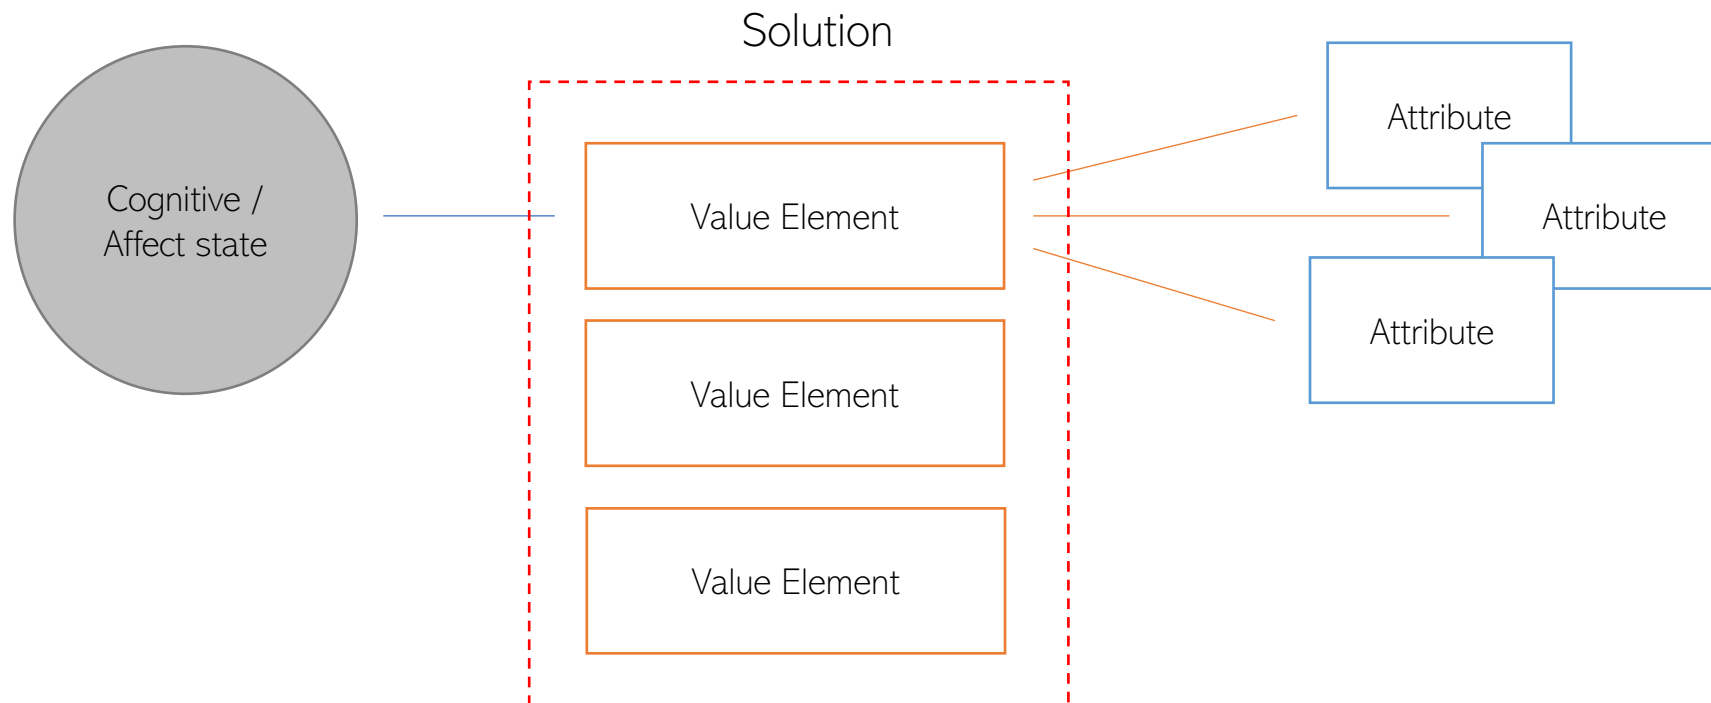

Color code different types of values

- Utilitarian
- Hedonic
- Symbolic
- Sacrifice

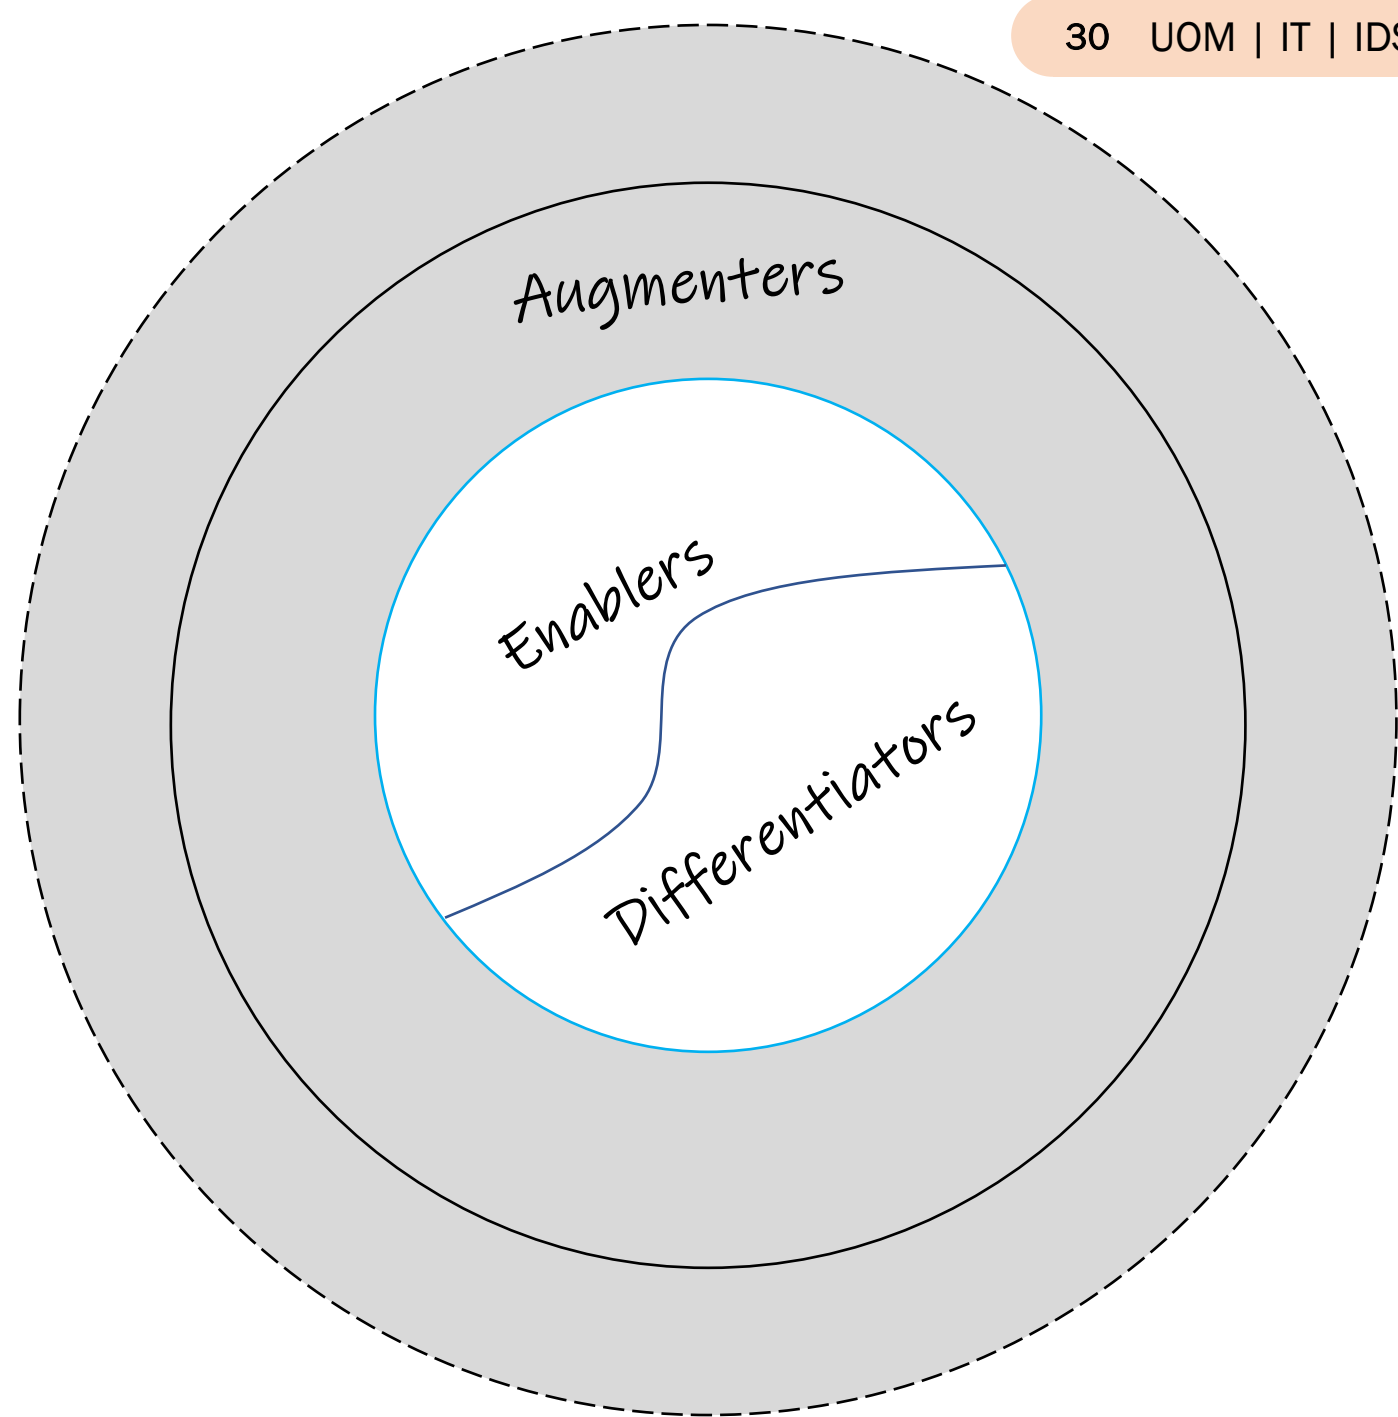

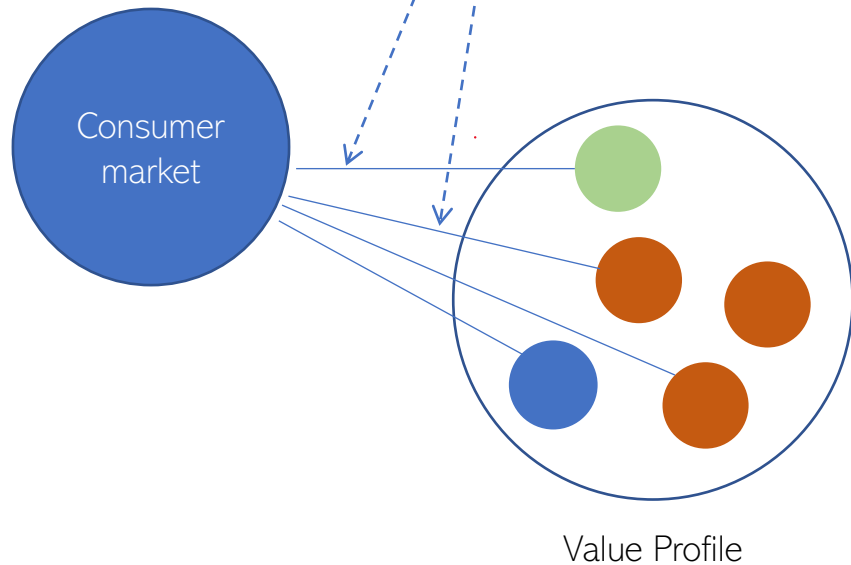

Value Element

Category of signals associated with a specific cognitive or affect state that would primarily instrumental in settling a single or a set of pains.

Value Profile Classifier

This classification is based on value element association with consumer market

Enablers, Differentiators, and Augmenters

- Enablers

- Appears in primary ring of VP
- The value elements keep the entire VP enabled.
- These are the reasons why consumers “consider” the solution
- Must ensure that these elements are always included and maintained fully
- Often not communicated in “consumer mind configurations”
- Commonly defines generic solution / industry of a solution

E.g. Rolex – elements associated with keeping and displaying accurate time

Boeing – elements related to ability to fly and safety of a flight

Enablers, Differentiators, and Augmenters (Cont)

- Differentiators
 - Appears in primary ring of VP
 - These are the value elements that determines the market realization of a solution
 - These elements are used in consumer mind configurations
 - These are what converts consumers from “considering” to “buying”
 - These elements ensures business survival

E.g. Rolex – elements that are associated with prestige and social empowerment

Boeing – elements related to flight operational economies and in-flight entertainment

Enablers, Differentiators, and Augmenter (Cont)

- Augmenter
 - Enhances the value elements primarily associated with
 - Appears in secondary and above rings of the VP
 - As the market matures, these value elements have the potential of getting converted to primary value elements

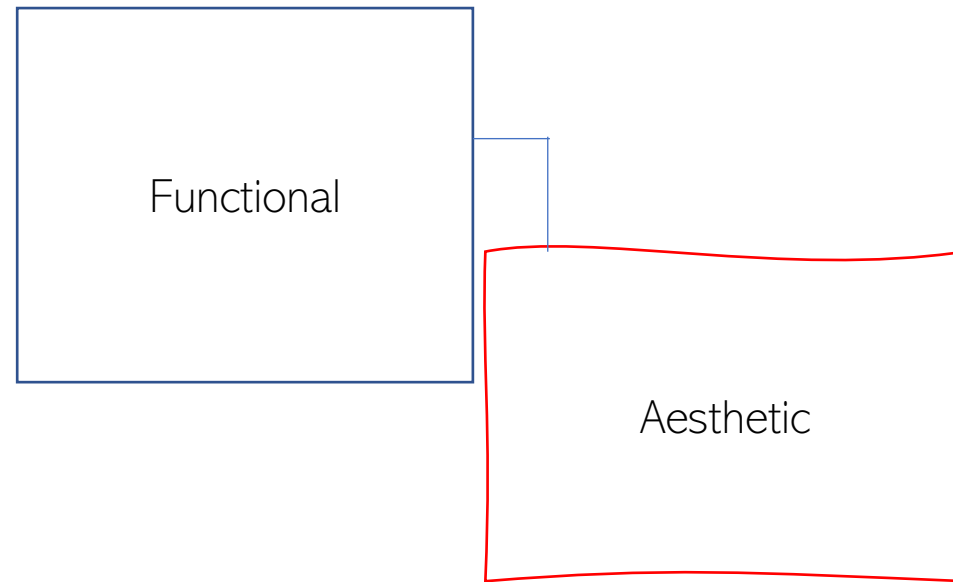

E.g. Boeing – elements associated with compatibility

attributes

Attribute

Characteristic of a form that becomes a source of signal for five sensors

pain – value element mapping

Pain		Value Element				
		Utilitarian	Hedonic	Psychological	Social	Scarifies
Physical	DE1	VE1 VE2				
	DE2	VE3				
Biological	DE3	VE4	VE5			
	DE4		VE6	VE7	VE8	
Psychological	DE5			V9		
	DE6			V10	V11	
	DE7			V12		
Social	DE8				V13	
	DE9				V14	
Economical	DE10					V15
	DE11					V16
	DE12					V17

Association Classifier Tagging

- This must be done based on the consumer research and expert judgment process.
- If already existing market, determine the segment.
- Identify the differentiators. These elements are prominent in pain
- Identify the Enablers. May not be directly expressed by consumers. Need conscious identification.
- Identify the value elements that would enhance the value realizations of the identified differentiators and enablers. Tag as Augmenters.

Value Element	Differentiator	Enablers	Augmenter
VE1	x		
VE2	x		
VE3		x	
VE4		x	
VE _n			x

Value Element - Attribute Mapping

Value Element	Attributes	
	Functional	Aesthetic
VE1	A1	A2
VE2	A3	
	A4	
VE3	A5	A6
VE4	A7	
	A8	
VE17		

G₅

Activity 2200.1

Choose an IT product. Then do the following;

- Develop a component profile.
- Develop an attribute profile.
- Draw the value hierarchy.
- Describe the Value Profile with classifiers.
- Draw an Associated Value Profile.

continued
